A **Tooltip in Selenium** is a text that appears when a mouse hovers over an object on a web page. The object can be a link, an image, a button, a text area, etc. The tooltip text often gives more information about the object on which the user hovers over the mouse cursor.

```java
package practice;
import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.chrome.ChromeDriver;
public class Tooltip {
        public static void main(String[] args) {

                System.setProperty("webdriver.chrome.driver",
"D:\\chromedriver_win32\\New\\chromedriver.exe");
                WebDriver driver = new ChromeDriver();
                driver.manage().window().maximize();
                driver.get("https://www.facebook.com/");

                //find signup web element
                String ActualTooltip = driver.findElement(By.xpath("//a[@href =
'/reg/']")).getAttribute("title");
                String ExpectedTooltip = "Sign up for facebook";

                if(ActualTooltip.equalsIgnoreCase(ExpectedTooltip))
                {
                        System.out.println("Test Passed");
                }
                else
                {
                        System.out.println("Test Failed");
                }
        }
}
```
